

# Public-Interest Governance Infrastructure for Islamic Social Finance

AGP-led grant and development proposal with Prof. Anuar as advising member and JAKIM/MAIN as potential authority-side partners.

---

## Position

Live seeded MVP, not a paper concept

## Principle

Charity organizations do not pay AGP

## Route

Keep all grant pathways open

EVIDENCE

# AmanahHub is already live with public trust profiles.

Funders and partners can inspect a working public directory today, supported by deployed protected workspaces.

**46**  
Visible organisations in the public charity directory

**Categories**  
Mosque/surau, waqf, zakat, foundations, welfare and cooperative

**Protected apps**  
amanahOS and AGP Console are deployed login surfaces

**37**  
Published donor-facing trust profiles

**Trust tiers**  
Gold, Silver and Bronze profile language is visible

**Grant proof**  
A live MVP reduces funder execution risk

PROBLEM

# Islamic giving has scale, but governance is fragmented at the operating edge.

The gap is not generosity. It is consistent evidence, reporting, review and public trust across thousands of community institutions.

---

## Donor confidence

Donors need visible accountability before giving repeatedly.

## Manual burden

Reports and evidence often sit in scattered files, forms and spreadsheets.

## Oversight pressure

Authorities need a live view without replacing state or institutional authority.

## Volunteer reality

Mosque and surau committees need simple routines, not heavy software.

## Behaviour change

Better governance requires habit formation and guided adoption.

## Public trust

Amanah must be visible, reviewable and updated over time.

SOLUTION

# AGP connects donor trust, organization operations and evaluator control.

Three live product surfaces share one evidence and scoring backbone.

---

## AmanahHub

Public directory, verified profiles, Amanah scores, certification tiers and direct-to-charity giving context.

## amanahOS

Workspace for profiles, accounting, evidence, projects, reports, policy kit, trust score and certification.

## AGP Console

Control plane for trust events, governance cases, review queues, scholar approval and publication.

Shared backbone: Amanah scoring engine, trust events, fund accounting, audit logs, public profile publication controls and Supabase-backed evidence records.

OPERATING MODEL

# The trust loop turns amanah into a repeatable governance rhythm.

AGP creates a path from registration to evidence, review, scoring and selective publication.

# AGP is funded around charities, not from charities.

The platform protects charity organizations from AGP fees while institutions and sponsors fund the infrastructure they benefit from.

---

## Funded by

- Grant funding for development, expansion and operations.
- Corporate ESG/CSR sponsorship for onboarding and audit-readiness cohorts.
- Zakat, waqf, council and institutional support for long-term ecosystem value.

## Sponsored service lines

- Organisation SaaS subscription and managed bookkeeping.
- Audit-readiness, certification support and governance workshops.
- Institutional dashboards, CSR/funder reporting tools and reviewer/Shariah marketplace.

# Register the ecosystem first; activate governance over time.

AGP can become the implementation partner for a living registry and governance workflow under an authority scope.

---

## Authority scope

JAKIM or a state MAIN identifies the pilot or rollout cohort.

## AGP registration

AGP registers mosques, suraus, charities, waqf initiatives and approved entities.

## Member activation

Organizations update profiles, reports, evidence and certification progress over time.

## For JAKIM/MAIN

Dashboards show reporting gaps, audit-readiness signals and improvement progress.

## For organizations

Guided onboarding and governance support without AGP fees.

## For donors

Clearer trust signals before donating.

## Prof. Anuar strengthens the behaviour-change and evaluation layer.

The recommended role is advising member, allowing AGP to apply directly while keeping academic and research pathways open.

---

### Adoption model

Explain what drives digital governance uptake among committees and administrators.

### Training design

Shape workshops around HRD, organizational learning and volunteer-led capability.

### Evaluation method

Guide baseline/endline logic, interviews and behavioural measurement.

### Credibility

Position AGP as a serious governance intervention, not only software.

PILOT EVALUATION

# Success is measured as capability change, not account creation.

The pilot should prove that organizations become more evidence-ready, report more consistently and improve trust signals.

### Registry coverage

100% of agreed JAKIM/MAIN pilot cohort registered.

### Evidence readiness

80% complete core evidence pack.

### Reporting discipline

50% improvement in timeliness against baseline.

### Amanah movement

+10 to +15 points where baseline gaps exist.

### Remediation

70% of findings closed within agreed cycle.

### Trust perception

20% donor confidence lift after viewing public profiles.

# Lead with AGP direct applications, but keep every viable route open.

The grant execution board remains the pipeline: no route is dropped while JAKIM/MAIN and advisor conversations mature.

---

## Immediate base

MD Status, Hasanah Micro, IsDB Engage registration, JAKIM/MAIN letter.

## Build credibility

Cradle CIP, SC FIKRA ACE, JAWHAR engagement, Shariah advisor.

## Accelerate

MDEC MDCG, IERIF/INCEIF, Hasanah Special Grant, pilot coordinators.

## Scale prep

IsDB Transform Fund, pilot evidence pack, CSR/ESG sponsorships.

## Scale

MDAG, additional state MAIN expansion, regional OIC partnerships.

## Academic route

University-linked co-applications remain open when funder fit is strong.

USE OF FUNDS

# RM550,000 funds a serious 12-month proof cycle.

The budget supports product hardening, research/evaluation, training, field operations and institutional readiness.

|                                                                                              |                                                                                      |                                                                             |
|----------------------------------------------------------------------------------------------|--------------------------------------------------------------------------------------|-----------------------------------------------------------------------------|
| <b>RM180k</b><br>Platform development, configuration, trust profile polish and data exports. | <b>RM90k</b><br>Research design, surveys, interviews, analysis and reporting.        | <b>RM80k</b><br>Training, governance workshops, materials and facilitation. |

MEETING ASK

# Leave with advisory support and a practical institutional path.

The decision is not to close every route today; it is to secure enough alignment to move the next proposals forward.

---

## 1. Advisor confirmation

Invite Prof. Anuar to advise behaviour-change, training and evaluation.

## 2. Institutional door

Identify the first JAKIM/MAIN or JAWHAR conversation and authority scope.

## 3. Grant packaging

Prepare modular proposals for direct grants, institutions and academic routes.

## Proposed close

Can Prof. Anuar advise the organizational behaviour model while AGP approaches JAKIM/MAIN and keeps all grant routes open?

## Next artifact

One-page JAKIM/MAIN proposal letter plus modular grant concept notes.

## Near-term proof

Use the live 46-org / 37-profile MVP as the demo evidence.
